E20 VEHICLE PROTECTION PORTAL

Website layout, features and working-model functions

Project problem: Reduction in fuel mileage in some vehicles associated with E20 petrol.

Proposed solution: A government-backed E20 vehicle damage guarantee concept where consumers can register vehicles, report suspected problems, submit evidence and track claim progress.

1. Customer Dashboard

Show registered vehicles, complaints submitted, pending complaints, claim decisions and notifications. Use clearly labelled sample figures for the college demonstration.

2. Vehicle Registration

Collect owner name and demo contact details, vehicle registration number, manufacturer, model, manufacturing year, purchase date, odometer reading and manufacturer-stated E20 compatibility. Generate a vehicle ID.

3. Complaint Registration

Complaint categories: reduced mileage, engine performance concern, fuel-system concern, suspected corrosion or other issue. Capture date first noticed, description, odometer reading and inspection status. A full implementation can accept photos and service bills.

4. Complaint Tracking

Generate a unique complaint ID and show: submitted → document verification → inspection scheduled → technical investigation → approved/rejected with reason → repair support or compensation decision. Submission does not guarantee approval.

5. Guarantee and Policy Information

Explain eligibility, required documents, exclusions, inspection process, decision timelines and proposed compensation process. These rules must be formally defined before a real service operates.

6. Service Centre Locator

List authorized/participating service centres, addresses, contact details, hours and appointment requests. Mark sample locations clearly as demo data.

7. Help and Support

Include FAQs, complaint guidance, contact form, accessibility support, feedback and a guided assistant to help select a complaint category.

8. Admin / Government Dashboard

Authorized demo admins can view complaints, verify documents, assign inspections, update statuses, record findings, approve/reject with reasons, and view trends by vehicle model, area and issue.

9. Optional Innovation Features

Feature	Purpose
Mileage comparison	Compare user-entered before/after mileage; not a technical diagnosis.
Notifications	In-app status alerts; SMS/email requires integration.
Complaint heatmap	Show anonymized complaint counts by area.
Document checklist	Explain documents potentially needed for a claim.
Inspection appointment	Request and view an inspection slot.

Recommended Website Navigation

Menu	Function
Home / Dashboard	Customer overview and quick actions
Register Vehicle	Add/manage vehicle details
File a Complaint	Submit issue details and evidence
Track Complaint	View complaint ID and status
Guarantee & Policy	Read proposed coverage and process
Service Centre Locator	Find/request inspection support
Help & Support	FAQs and customer assistance
Admin Dashboard	Review and manage complaints

Suggested User Journey

1. Customer creates an account → 2. Registers a vehicle → 3. Checks manufacturer-stated E20 compatibility → 4. Files a complaint → 5. Receives a complaint ID → 6. Tracks document review and inspection → 7. Views the final decision and any eligible support.

Recommended Build Priorities

Build first: customer login, vehicle registration, complaint form with evidence upload, claim ID generation, claim tracking and an admin panel to update status. Add appointments and analytics next.

Important Prototype and Safety Notes

This is a student project concept, not an official government portal or existing guarantee. Do not use government logos or imply official affiliation. A real guarantee requires approved policy rules, eligibility and exclusions, funding, inspection standards, privacy safeguards and appeals. A complaint alone does not prove E20 caused damage; qualified technical assessment is needed. Use fictional/sample data in the classroom prototype.
